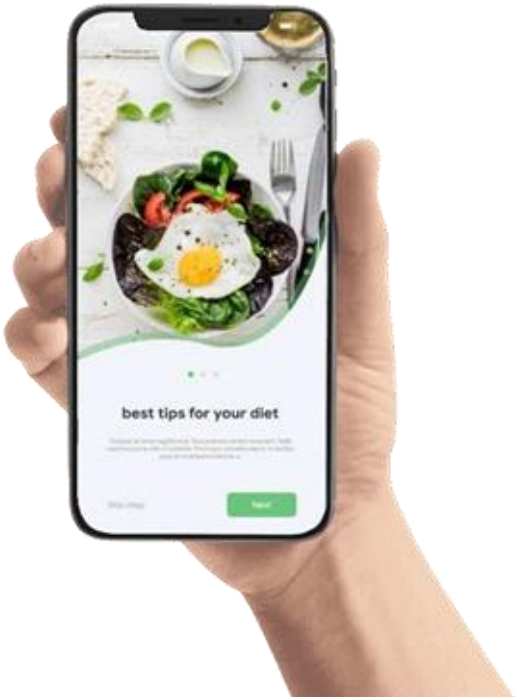
EcoBite (TBD)

About

Ecobite is a mobile app enabling consumers to order food directly from small and medium food producers, food stores and restaurants.

In addition, the service enables users to conveniently order fresh groceries from nearby producers, bypassing large retailers. This supports local economies, allowing consumers to make mindful choices while enjoying locally-sourced food at cheaper prices.



Market Landscape

Globally Uber-Eatz and in Europe, companies like Wolt (Today DoorDash) and Bolt pioneered the first widely-used mobile apps for delivering restaurant orders to homes through mobile and web platforms. **They introduced Grocery and supermarket deliveries 2021-2023** These were the first-generation services. Food Delivery Revenues where EUR 12.8B Y2022, 96B in 2024 and 2030 EST 166B

Evolution of Services

Recognizing user demand for convenience, these companies evolved in their second stage to allow customers to order groceries and everyday products from supermarkets via an easy-to-use mobile app. Substantial capital investments—hundreds of millions—were made to by first service providers in order to introduce this concept to consumers and retailers alike. This allow a new service provider planning to enter the market to quickly bypass many obstacles and enables immense monetary savings. In turn, the capital expenditures are going to be much smaller, allowing to offer better rates to retails, couriers and consumers. This provides a substantial competitive edge over current market players.

Market Challenges

Currently, we see that the following challenges affect two key market participants:

1. **Small and Medium Producers:** These producers struggle to get their products on supermarket shelves, making it nearly impossible for many. Additionally, commercial terms often favor retailers over producers, creating significant barriers to entry.
2. **Consumer Preferences:** Today's consumers are increasingly aware of BIO and ESG issues and prefer to purchase local, fresh items from small producers. Mainstream retail offerings often do not align with these preferences.

Opportunity for efficiency

In recent years all parties feel the impact of relatively high inflation. Enhancing efficiency in ordering logic and logistics, along with implementing "on-demand" and "just-in-time" management of demand, presents a valuable opportunity that would benefit everyone in the supply chain.

Competitive Landscape

In the competitive landscape of food delivery, while there are many small and medium players nationally, 2 of the most prominent companies leading the first and second generations of services are Bolt and Wolt (now part of DoorDash). Scope of service widening created Unicorns in Asia like Gojek

2015

Founded in 2015 in Finland, Wolt quickly gained traction in the market.

By 2017, Wolt achieved nearly €10 million in revenue, which surged to over €30 million in 2018.

Over its first four years, Wolt successfully raised more than €150 million through Series A, B, and C funding rounds.

2019

Bolt launched Bolt Food in 2019, entering the food delivery space shortly after Wolt.

The company has secured over €2.3 billion in funding across 19 rounds, reflecting substantial investor confidence.

2025 ECOBITE (TBD)

Direct access to market for local food producers. AI enpowered Client app with reccommendation engine

Lower fees for merchants and clients

Better compensation for couriers

Market opportunity Finland

- **Delivery Hero (DoorDash brand) exited Finland on 27 Feb 2026**, leaving **Wolt as the de facto monopoly platform**
- Restaurants are increasingly concerned about **high commission levels**, while users face **rising delivery fees**
- **Uber Eats may enter later**, but the current market structure creates a **rare entry window in Europe**
- **Market validation**
- DoorDash Finland revenue: **€124M → €150M → €175M**
- Business reached **break-even or better**
- Exit was **strategic, not operational** — HQ policy focuses only on markets where they can achieve **#1 position**
- **Long-term vision**
- Platform roadmap includes evolving into a **“super-app”** with additional services beyond food delivery
